

SOOHWAN JEON

• Seoul, South Korea • +82-10-6331-0026 • sjds100@gmail.com
• linkedin.com/in/soohwan-jeon • Automotive Validation & Diagnostics Engineer

PROFESSIONAL SUMMARY

Automotive validation and diagnostics engineer with 5 + years of hands-on engineering experience across IVI system QA, vehicle communication protocol analysis (UDS, DoIP, CAN), and real-vehicle testing for global OEM programs — Hyundai Motor Group, Jaguar Land Rover, and Volkswagen Group. Proven ability to own the full test lifecycle across real-vehicle and bench environments, combined with a track record of project leadership: independently led a DoIP integration project to completion in 4 months vs. a 1-year plan; acted as interim PM to compress a multi-vendor localisation project from 1 month to 2 weeks; and currently serving as technical bridge engineer between a multinational development team and Hyundai R&D with ~90% of daily work conducted in English

CORE COMPETENCIES

Diagnostic Protocols: UDS (ISO 14229), DoIP (ISO 13400), CAN/CAN-FD, K-Line, KWP2000, OBD-II, 5-Baud-Init

Tools & Platforms: Wireshark, CANoe, PEAK-CAN, ADB, QFIL, Fastboot, JIRA, Confluence, Notion

Testing & QA: Regression / BAT / Black-Box Testing, Root Cause Analysis (HW + SW layers), Full Test Lifecycle, Protocol Reverse Engineering

OEM Diagnostic Platforms: ODIS (VW Group), JLR Pathfinder, JLR SDD, JLR Diagnostic, G-Scan

Project & Team Coordination: Cross-functional PM, Interim PM, Validation Lead, ASPICE Fundamentals, Multinational Bridge Engineering

Languages: Korean (Native) | English (Professional Working Proficiency)

PROFESSIONAL EXPERIENCE

IVI Test Engineer / Bridge Software Engineer - FPT Software Korea

pangyo, South Korea Mar 2026 – Present

- Leading real-vehicle IVI validation for Hyundai's next-generation EV/HEV lineup — managing 3–4 pre-production vehicles simultaneously running Pleos software tiers (Connect-Standard, Lite, Wide) within HMG's R&D validation programme.
- Execute up to 90 regression test cases per day across software builds shipped 1–2 times daily; collect logs and video evidence, track issues in JIRA/Confluence, and author Release Notes and Test Reports.
- Manage vehicle/version scheduling; perform on-site firmware flashing via ADB, QFIL, and Fastboot; replace IVI head units in-field when hardware fails during testing.
- Serve as technical bridge engineer between a large Vietnam-based development team (developers, PM, App lead) and Hyundai Motor Group researchers — coordinating issue reproduction, translating technical findings, and reporting fix-verification results (~90% of all work conducted in English).
- Proactively studied English and Vietnamese outside working hours to build cross-cultural rapport and minimise miscommunication across Korean, Vietnamese, and OEM stakeholder groups.

Vehicle Test Engineer / Interim PM - Vital Auto

pangyo, South Korea Oct 2023 – Jun 2024

- Designed and executed BAT, Full TC, and Regression Test strategies for Hyundai's export-market AV/AVN infotainment systems; ran 290 + BAT test cases per day and consistently identified 4–5 + new issues daily via CANoe, PEAK-CAN, and Wireshark.
- Diagnosed a recurring audio-distortion defect across MS400A/MS500A head units: designed a multi-variable test matrix spanning multiple SW versions, bench units, and HU combinations; isolated the exact frequency/volume threshold causing distortion; validated fix via speaker replacement and OEM reference equipment
- Verified the full AV/AVN connectivity suite: Android Auto, Apple CarPlay, Bluetooth, and USB.
- Acted as Interim PM for multilingual UX verification: restructured multi-vendor test coverage by splitting tasks by language per vendor and by feature area (Media, Climate, etc.) per tester strength — compressing a 1-month project into 2 weeks.

Diagnostics Engineer / DoIP Protocol Lead - EZDS

Seoul, South Korea Feb 2023 – Aug 2023

- Independently led the team's first JLR DoIP (ISO 13400) diagnostic integration project — self-studying ISO 13400 while coordinating SW team (simulator updates, XML schema revisions) and HW team (OBD cable fabrication) contributions
- Captured and analysed real-vehicle DoIP packets via Wireshark; reconstructed request/response packets to validate ECU behaviour at the protocol layer.
- Identified a hardware-layer root cause blocking all simulator communication (missing 5 V on OBD pin 8 per ISO 13400); designed and fabricated a custom OBD-to-RJ45 diagnostic cable to resolve it.
- Delivered full diagnostic coverage for 2016 + JLR models (Discovery, Range Rover, Evoque, Velar) — core integration completed in 4 months vs. a 1-year plan; remaining time stabilised via user and dealer feedback.

PROFESSIONAL EXPERIENCE (CONTINUED)

Diagnostics Engineer / UDS & Multi-OEM Protocol Analysis - EZDS Seoul, South Korea Jul 2019 – Apr 2022

- Leading real-vehicle IVI validation for Hyundai's next-generation EV/HEV lineup — managing 3–4 pre-production vehicles simultaneously running Pleos software tiers (Connect-Standard, Lite, Wide) within HMG's R&D validation programme.
- Execute up to 90 regression test cases per day across software builds shipped 1–2 times daily; collect logs and video evidence, track issues in JIRA/Confluence, and author Release Notes and Test Reports.
- Manage vehicle/version scheduling; perform on-site firmware flashing via ADB, QFIL, and Fastboot; replace IVI head units in-field when hardware fails during testing.
- Serve as technical bridge engineer between a large Vietnam-based development team (developers, PM, App lead) and Hyundai Motor Group researchers — coordinating issue reproduction, translating technical findings, and reporting fix-verification results (~90% of all work conducted in English).
- Proactively studied English and Vietnamese outside working hours to build cross-cultural rapport and minimise miscommunication across Korean, Vietnamese, and OEM stakeholder groups.

KEY ACHIEVEMENTS

- **4 months vs. 1-year plan:** Solo lead of JLR DoIP diagnostic integration from zero to production
- **2 weeks vs. 1 month:** Multi-vendor multilingual UX verification delivered as Interim PM
- **40%+ enquiry reduction:** 290+ test cases/day: Auto-VIN implementation across full JLR lineup (2006–2027)
- **290 + test cases/day:** BAT throughput at Vital Auto; 4–5 new defects identified daily

ADDITIONAL EXPERIENCE

Manufacturing & Construction Worker Australia Nov 2024 – Nov 2025

Working Holiday Visa(417) — Australia

- Lived and worked independently in Australia for 12 months in full English-speaking environments across fire door manufacturing and scaffolding/safety-rail installation; built communication habits — including maintaining a personal technical glossary — now applied directly in the current multinational bridge-engineer role.

Sergeant - The Republic of Korea Airforce Suouth Korea Mar 2017 – Feb 2019

- Trained, disciplined and taught different military skills
- Trained in firing weapons, and hand to hand combat.
- Learned responsibilities invoved as a Duty Officer

EDUCATION

Songpa Technical High School Seoul, South Korea Mar 2014 – Feb 2017

Mobile Electronics

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

National Technical Qualifications (Human Resources Development Service of Korea)

Electronic Equipment Technician | Electronic Calculator Technician | Wireless Equipment Technician

White Card (Construction Industry) (Australia)

First Aid & CPR Certificate (Australia)

Automotive & Engineering — Coursera (2026)
